Professional Summary

Power Platform Developer and Automation Engineer with 4+ years of experience building scalable business applications using PowerApps, Power Automate, and VBA. Adept at front-end design and user experience, with proven ability to streamline workflows and automate repetitive processes. Skilled in both scripting and design tools, with a unique blend of technical and visual expertise. Certified in Microsoft Power Platform Fundamentals (PL-900) and recognized with multiple awards for innovation and performance at Fujitsu.

Technical Skills

- Power Platform & Microsoft Tools:** PowerApps, Power Automate, Power BI, SharePoint, Power FX, Excel VBA
- Scripting & Programming:** PowerShell, Bash, Python, C#.NET, SQL
- Design:** HTML, CSS, Figma, Adobe Photoshop, UI/UX
- Documentation:** User manuals, Detailed Design, Process Flow
- Troubleshooting:** L3 Support, Service Now, Jira

Work Experience

NOC Engineer

Fujitsu Global Delivery Center

April 2026 – Present

- Monitor network and infrastructure alerts to ensure system availability.
- Send incident notifications and coordinate with Network and DIC teams for issue resolution.
- Monitor and manage ServiceNow tickets and service requests.
- Configure maintenance settings in Zabbix for planned activities.
- Generate daily and monthly operational reports.
- Review Azure Event IDs and create incident tickets when required.
- Perform health monitoring for OneID services.
- Automated email notifications using Power Automate to alert Network and DIC teams when nodes remain down for more than 20 minutes.
- Developed a Leave Tracker application using Power Apps, Power Automate, and SharePoint Lists to streamline leave requests and automate approval notifications.
- Escalate issues and coordinate with support teams to minimize service impact.

Automation Engineer

Fujitsu Global Delivery Center

June 2022 – March 2026

- Built and deployed multiple PowerApps Canvas applications to manage internal projects, automate survey distribution, and assist QA workflows, improving operational efficiency across departments.
- Automated repetitive reporting tasks using Excel VBA, reducing manual work by 80% for recurring server logs and document tabulations.
- Created a PowerApps-based project management solution for EASU team, enabling better project tracking and approval transparency.
- Designed a post-project feedback system using PowerApps and Power Automate, achieving a 40% improvement in client response rates.
- Collaborated cross-functionally with IT, QA, and management teams to gather requirements and design tailored automation tools.
- Provided L3 support for PowerApps solutions and automation tasks such as VBA, PowerShell, and Bash, ensuring reliable performance, timely issue resolution, and continuous improvement.
- Created comprehensive user manuals and detailed design documentation for every application and automation developed to support user adoption and future maintenance.

RIM Bootcamp Trainee

Fujitsu Global Delivery Center

December 2021 – May 2022

- Developed Bash scripts for retrieving Linux server specifications, streamlining inventory and diagnostics.
- Automated generation of MS365 and Linux error log reports using VBA and Python, contributing to more proactive incident resolution.
- Created a Python-based web scraping tool with a simple UI to assist the EASU team with data collection, reducing manual workload.

Graphic Designer

JJ & D Trading and Printing

September 2021 – November 2021

- Designed custom digital and print layouts for T-shirts, tarpaulins, calling cards, and certificates using Adobe Photoshop.
- Consulted with clients to deliver visually consistent designs tailored for branding and marketing purposes.
- Adapted designs for various formats, ensuring high-quality output in both digital and print mediums.

Projects

ITSM Ticketing App (*PowerApps + SharePoint + Power Automate + Power BI*)

Developed a Canvas App integrated with SharePoint to manage IT support tickets. Enabled users to raise, track, and close tickets with automated email notifications and filtered gallery views. Reduced resolution time by improving ticket visibility and workflow transparency.

Leave Tracker App (*PowerApps + SharePoint + Power Automate + Power BI*)

Created a leave management system allowing employees to submit leave requests and managers to approve or reject them with a single click. The app sends automated email notifications to the manager upon request submission, and to the requester once the leave is approved or declined. Automated tracking and approval flows reduced manual HR tasks and improved process accuracy.

Employee Onboarding App (*PowerApps + Dataverse + Power Automate + Power BI*)

Designed and developed an employee onboarding system using Dataverse as the primary data source to manage onboarding requests, task assignments, and employee records. Implemented role-based access for HR and department managers to track onboarding progress from request submission to completion. Automated approval workflows, notifications, and task reminders using Power Automate, improving process visibility, reducing manual coordination, and ensuring timely onboarding execution.

Node Alert Monitoring Automation (*Power Automate + Outlook*)

Developed an automated infrastructure monitoring workflow using Power Automate to process system alert emails received from monitoring tools. The solution extracts critical information such as server node name, IP address, and downtime details from incoming alerts, performs automated validation checks, and monitors for corresponding recovery notifications. Implemented conditional escalation logic to automatically notify support teams when downtime persists beyond a defined threshold, reducing manual monitoring effort and improving incident response times.

Education

Bachelor of Science in Information Technology

Quezon City University

2017 - 2021

Certificate

Microsoft Power Platform Fundamentals PL900

★ Awards
